

Keep that plant alive

Match the answers to the questions as shown in the example.

~~Why do plants produce seeds?~~

How do roots help a plant to grow?

How do leaves help a plant to grow?

Why do leaves have tiny breathing holes called stomata?

What happens to a plant when it does not get sufficient water?

What happens to a plant when it gets too much water?

Why do plants in hot, dry countries often have thick, fleshy leaves and stems?

The roots may rot, making the plant die

By taking up water and nutrients

~~So they can grow new plants just like them~~

To take in carbon dioxide and give out oxygen

By absorbing sunlight for photosynthesis

It will wilt, dry out and perhaps die

So they can store water for times of drought
