

Sowing Seeds

S2. Months of the year

The yearly calendar is very important to gardeners. Many garden tasks have to be carried out during specific months or seasons if they are to be successful. For example, most seeds are sown in spring months because the conditions of temperature and light levels are ideal for germination, and there are plenty of sunny months ahead for the plant to grow and mature. Other tasks like rose pruning are carried out in winter when the plants are not growing.

Complete the Gardening Cycle by numbering the months from 1 to 12, beginning with January.

 <p>April [spring]</p>	 <p>August [summer]</p>	 <p>December [winter]</p>	 <p>November [autumn]</p>
 <p>February [winter]</p>	 <p>July [summer]</p>	 <p>September [autumn]</p>	 <p>June [summer]</p>
 <p>January [winter]</p>	 <p>March [spring]</p>	 <p>October [autumn]</p>	 <p>May [spring]</p>
